Full-stack software engineer (React, React Native, TypeScript, Node.js) with 2 years building production web and mobile apps, plus a live AI product I designed, shipped, and operate solo.

EXPERIENCE

Software Engineer & Founder

Nov 2025 – Present

ResumeMatch

New York, NY

- Built and operate resumematchapp.com solo on AWS serverless: Lambda, API Gateway, DynamoDB, S3, and CloudFront, with Cognito auth and per-plan usage limits enforced in the Lambdas rather than the client.
- Audited the frontend against Section 508 / WCAG 2.1 AA and published a conformance report stating its own limits. A re-run caught **44** untested contrast failures in the light theme, traced them to five design-token values, and cleared all five audited routes in both themes
- Cut repeat analyses from a 34s median to **20ms** with a DynamoDB cache (SHA-256 content hashing, gzip), measured across 140 production requests, and zeroed model cost on hits.
- Caught the AI rewrite proposing keywords the source resume did not support in 22 of 31 edits, **71%**, using an offline harness I built (10 resumes, 3 configs, 60 runs). Shipped a deterministic evidence guard that drops those at generation time; 26 rejections in production.
- Ship through GitHub Actions, which gates every push on lint, tests, and build before the deploy job runs, then syncs to S3 and invalidates CloudFront over GitHub OIDC with no stored AWS keys.
- Shipped a Mock AI Interview feature on Deepgram Nova-3 speech-to-text with per-session keyterm prompting derived from the resume and job description, plus Bedrock per-turn STAR feedback and an end-of-session assessment.

Full-Stack Software Engineer

Sep 2024 – Jun 2025

Clipp Inc. (Early-stage startup)

New York, NY

- Eliminated N+1 queries and redundant frontend round-trips across ordering workflows by redesigning GraphQL schema and resolvers to batch nested order data.
- Built a modular Jest test framework spanning Payments, Purchase Orders, and Returns, using strict TypeScript contract validation to catch cross-service data mismatches before release.
- Fixed an invoice refund flow in the Next.js web app using shallow routing to keep URL query parameters in sync without remounting the page, inside a Yarn workspaces monorepo.

Full-Stack Software Engineer

Apr 2024 – Sep 2024

CAN International Corp.

New York, NY

- Removed manual data entry from the document intake pipeline by integrating Azure Form Recognizer, converting unstructured PDF job descriptions into validated typed JSON records.
- Built and launched a React Native mobile app on Firebase and Azure supporting rewards, payments, and job board workflows.

PROJECTS

Financial Document Intelligence Agent | Python, React, FastAPI, Bedrock, LangChain, Chroma

Apr 2026 – Present

- Built a governance-first RAG/ReAct agent on Bedrock (Claude Haiku 4.5, Titan v2 embeddings) over a 10-handler document-format registry, with context-policy admission dropping chunks before the model sees them, Bedrock Guardrails, and a per-answer JSONL audit trail. 689 logged runs, **27%** multi-hop.
- Built the answer-trust layer (grounding validation, risk scoring, React + FastAPI review workflow), then caught it flagging correct answers: it scored claims against 700-char-capped audit excerpts, so figures deeper in a chunk read as unsupported. Fixing it moved a frozen 32-case baseline from **6.4% to 2.9%** unsupported claims and 75% to 84% grounded.

Order Processing System | Java, Spring Boot, Kafka, PostgreSQL, Docker, Kubernetes

Mar 2026 – Apr 2026

- Built a Spring Boot event-driven order processing system with a transactional outbox, making order-event publication from PostgreSQL to Kafka reliable across service outages.
- Added consumer idempotency through a `processed_events` ledger with uniqueness constraints, preventing duplicate event execution under retry and redelivery.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, Bash **Frontend:** React, React Native, Next.js, Tailwind, HTML/CSS

Backend: Node.js, Express, FastAPI, REST APIs, GraphQL, Microservices, Spring Boot, Kafka

Cloud & Data: AWS (Lambda, API Gateway, DynamoDB, S3, Cognito, CloudFront, CloudWatch, Bedrock), Azure, PostgreSQL, MySQL, MongoDB, Firebase

AI/ML: LLMs, RAG, AI Agents, Embeddings, Vector Databases, Model Evaluation, Prompt Engineering, LangChain, Chroma

DevOps & Testing: Docker, Kubernetes, Git, GitHub Actions, Agile, Jest, Playwright, pytest, Claude Code, MCP, Copilot

EDUCATION

University at Buffalo, SUNY

Buffalo, NY

M.S. in Engineering Science (Artificial Intelligence)

Aug 2022 – Jun 2024

B.S. in Computer Science

Aug 2018 – Jun 2022

AWS Certified Developer – Associate

Issued Feb 2026
