WORK EXPERIENCE

Founder & Software Engineer | ResumeMatch

New York, NY December 2025 – Present

- Architected a multi-model Bedrock pipeline routing parsing and scoring to Claude Haiku 4.5 and resume rewriting to Claude Sonnet 4.6, cutting semantically incorrect edits by **50%** while maintaining a per-analysis cost under **\$0.05**.
- Built a Python post-LLM validation layer with five semantic and structural checks (umbrella terms, abbreviations, word boundaries, token overlap...) to recover keyword matches the LLM missed and proportionally adjust the match score.
- Designed a DynamoDB cache with SHA-256 content hashing and gzip compression that drops repeat-analysis latency from 25s to **19ms** and zeroes out Bedrock cost on cache hits.
- Shipped a Mock AI Interview feature backed by four Lambda handlers for start, turn, end, and session retrieval, with DynamoDB session storage and Bedrock-generated STAR feedback plus end-of-session assessments.

Full-Stack Software Engineer | Clipp Inc (Early-stage Startup)

New York, NY September 2024 – June 2025

- Built and evaluated LLM-based chatbot systems using n8n, LangChain, and Botpress, selecting Botpress and Python for production based on stronger flow control and lower implementation overhead.
- Optimized GraphQL APIs by redesigning schema and resolvers to batch nested order data, eliminating N+1 queries and redundant frontend round-trips across ordering workflows.
- Debugged incomplete ordering flows by tracing API errors through Datadog logs, identifying bottlenecks in backend GraphQL resolver invocations.
- Built a modular Jest test framework spanning Payments, Purchase Orders, and Returns, using strict TypeScript contract validation to catch cross-service data mismatches before release.

Full-Stack Software Engineer | CAN International Corp

New York, NY April 2024 – September 2024

- Integrated Azure Form Recognizer into the document intake pipeline, converting unstructured PDF job descriptions into validated typed JSON records and removing manual data entry steps.
- Built and launched a React Native mobile application integrating Firebase and Azure services to support rewards, payments, and job board workflows.

PROJECTS

Financial Document Intelligence Agent (Bedrock, LangChain, Chroma)

Apr 2026 – Present

- Built a RAG-based retrieval agent on Claude Haiku using the ReAct pattern, dynamically routing queries between Chroma and Tavily with local-first retrieval for finance and compliance queries.
- Implemented thread-safe Chroma ingestion with singleton coordination, producing source-attributed answers in under **4 seconds** with stable query consistency under concurrent access.

Order Processing System (Spring Boot, Kafka, Docker)

Mar 2026 – Apr 2026

- Built a Spring Boot event-driven order processing system with a transactional outbox, ensuring reliable order-event publication from PostgreSQL to Kafka and reducing dual-write inconsistency during service outages.
- Added consumer idempotency safeguards through a processed_events ledger with uniqueness constraints, preventing duplicate event execution under retry and redelivery scenarios.
- Enforced order lifecycle correctness through enum-driven state transitions and optimistic locking, preventing lost updates under concurrent distributed writes.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, C++, Bash

Frontend: React, React Native, Next.js, Angular, Flutter, Tailwind, HTML, CSS

Backend: Node.js, Express, GraphQL, Kafka, Redis, Flask, FastAPI, Spring

Cloud: Elastic, K8s, AWS (Lambda, API Gateway, DynamoDB, S3, Cognito, CloudFront, Textract), Azure, Docker

Data: MySQL, PostgreSQL, MongoDB, Firebase

AI/ML: LangChain, Chroma, TensorFlow, PyTorch, Scikit-learn, RAG, Prompt Engineering

Testing & Tools: Jest, Playwright, pytest, Git, Jira, Datadog, Figma, Linux

EDUCATION

University at Buffalo, SUNY

MS in AI (2024) | BS in Computer Science (2022)

AWS Certified Developer – Associate

Issued Feb 2026
